

MIGO ANNOUNCES NEW MIGO MOBILE TUNES™

New Product in Migo Mobile Line Automates the Way Consumers Move Music From Their PC to Most Any Mobile Phone

Redwood City, Calif., February 11, 2008— **Migo Software, Inc.** (OTCBB: MIGO), the content sync pioneer and global provider of content mobility software, today announced the availability of *Migo Mobile Tunes™*, an easy way for consumers to gather, organize and synchronize music tracks between a PC and a mobile phone. Migo Mobile Tunes enables mass market consumers to easily mobilize their favorite music tracks from their PC to their mobile phone.

Migo Mobile Tunes is perfect for mobile carriers, as well as mobile handset and flash memory card manufacturers, who want to make music consumption in a mobile environment “mass market simple.” The product is highly configurable, designed for easy integration of web links to virtually any online music services and also flexible enough to run directly off of removable memory, requiring no software installation on either the mobile phone or PC.

“Migo Mobile Tunes solves a huge consumer problem of getting playable music onto their mobile phone,” said Johnathan Tann, Migo Software’s SVP of Mobile Strategies. “Now, consumers can easily get full access to their PC music library on their phones. And this creates an even more exciting opportunity for our mobile customers who can now fully leverage users’ expanded access to their music libraries on mobile phones, as well as tap into online music services, to deliver an even richer, more complete mobile music experience without increasing customer support risk.”

Migo Mobile Tunes is fully compatible with Windows Vista and Windows XP. In addition it supports the following popular music types among others: mp3, WMA, m4a (iTunes), Real Audio, OGG.
