- **LITHIUM POLYMER RECHARGEABLE BATTERY**

DESCRIPTION

Introducing AX Wireless (Audio Xtreme Wireless): One of the first 5.1 wireless headphones to use RF technology and offer true 5.1 surround sound. The AX Wireless utilizes high frequency radio transmission to ensure optimum sound quality and distance. Six high performance speakers enable true 5.1 surround sound, not to be confused with other two channel audio solutions. Connect to your XBOX 360®, PS3®, DVD, home audio receiver or your computer through digital optical or digital coaxial outputs. Multiple headsets can be synchronized and used on a single audio source. A removable microphone can be used with XBOX Live®. An optional Bluetooth microphone can be purchased for voice communication for a PS3 or computer. TRITTON continues to provide innovative technology with the AX Wireless.
